Subject: RE: certified unit?

I am suggesting that a unit that advertises it has the capacity to heat 750 - 2500 square feet appears should raise questions. 750 square feet is one very large (~22'X34') room or multiple rooms, and 2500 square feet is larger than the average-sized house. Does this seem like a cookstove to you or a unit avoiding the regulation by incorporating the capacity to cook?

Subject: RE: certified unit?

Hello Lisa,

Thank you for the information. Are you suggesting that this is not a cookstove or it is not being primarily marketed as a cookstove?

Subject: certified unit?

Rafael, I have found the Nectre 2500-sq ft (<https://www.lowes.com/pd/Nectre-Wood-Fired-Oven/1002942934>) and 750-sq ft (<https://www.lowes.com/pd/Nectre-Wood-Fired-Oven/1002942924>) for sale at Lowes – per the attached pdf, it states that it is certified, but I do not see it on EPA's list. It could be claiming it's exempt as a cookstove, but it is also reporting square footage for heating. It seems to fall into the residential wood heating category. Can you please let me

know if this is a certified unit? If it is exempt, can you provide me with the basis for exempting units that heat 750-2500 sq ft? Thanks!

Lisa
